                                    analysing the expression profile or expression pattern of a gene derived from Coryneform bacterium, and identifying a homologue of a gene derived from coryneform bacterium. Coryneform bacteria are useful for producing amino acids, nucleic acids, vitamins, saccharides and organic acids, particularly L-lysine. The present sequence is a nucleic acid described in the exemplification of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the
                                                                                                                                                                                                                                                      Novel polynucleotides derived from Coryneform bacteria, for identifying mutation point of a gene, measuring expression of a gene, analysing expression profile or pattern of a gene and identifying homologous gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       C glutamicum
                                                                                                                                              sequences from the Coryneform bacterium Corynebacterium glutamicum. These are useful for identifying the mutation point of a gene derived from a mutant of coryneform bacterium, measuring expression amount and

                                                                                                                                                                                                                                                                                         polynucleotides obtained from adult testes, foetal brain, adult brain, brain, (foetal and adult), foetal kidney, adult spleen, and adult thymus cDNA libraries. The polynucleotides and proteins are predicted to have biological activities which would make them suitable for treating, preventing or ameliorating medical conditions in humans and animals. Suggested activities include nutritional activity, cytokine and cell proliferation/differentiation activity, immune stimulating (e.g. as

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   888888888888888888
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            metabolism and oxidative phosphorylation (SMP) proteins given in CC AAB79243 to AAB 79633 which are involved in carbon metabolism and cenergy production. The C. glutamicum SMP gene can be used in vectors CC (II) for expression in host cells and production or modulation of cor nonproteinogenic amino acid (preferred), a purine or pyrimidine base, a nucleoside, a nucleotide, a lipid, a saturated or unsaturated fatty CC acid, a diol, a carbohydrate, an aromatic compound, a vitamin, a CC cofactor, a polyketide, or an enzyme. The presence of (I) or SMP proteins CC (III) encoded by them are used for diagnosing the presence or activity of CC corynebacterium diphtheriae in a subject. (I), (II), (II) or host cells containing them are used to map genomes of organisms related to CC c. glutamicum, identify and localise C. glutamicum sequences of interest, in evolutionary studies, in determining SMP protein regions required cor metabolism of sugars, and in modulating high-energy molecule production CC in a cell (i e Arp. NADPH)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Query Match

                 This invention describes novel polypeptide fragment sequences (I) and their encoding nucleic acids (II) which are highly expressed in normal bladder tissue and have cytostatic activity. (II) are used for recombinant expression of (I) and to isolate complete genes. (I) are used to identify agents suitable for the treatment of bladder tumours, to directly treat this form of cancer (including expression from gene therapy vectors), or are used in a preparation for cancer treatment. (I)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     3040 ttgttgggtggcaatttg 3057

This allows a significantly longer fragment of the gene to be revealed, and therefore reduces the number of failures because of ESTs from different libraries representing different parts of the same unknown gene distorting the estimated frequency of occurrence in a particular tissue. AAZ4212-Z42248 represent EST fragments derived from a human normal bladder tissue cDNA library which encode the protein fragments represented in AAY60329-Y60591.
                              inserted in a suitable vector and expressed in a transformant of a suitable organism such as E.coli HMS-174 or HB-101 or a yeast. It is new so are a SP of human myeloid cell origin; precursors of SP having an N-terminal splittable or signal peptide; and a transcription-controlling DNA sequence required for expression of the gene. SP has antithrombotic activity, esp. useful in disseminated intravascular coagulation. By expression of the protease gene in a suitable transformant organism SP
                                                                                                                                                                                                                                                                                   09-SEP-1987;

The protein is isolated from the green-lipped mussel (Perna canaliculus) and exhibits, inter alia, anti-thrombin activity and divalent metal cation binding activity. The serine protease inhibitor protein has a molecular weight of about 55 kilo Daltons. The protein, and its fragments, are useful in medicaments, in food, as dietary supplements or as bioremediation agents. In the dietary supplements, the protein is associated with or bound to at least one divalent cation (such as calcium, magnesium or zinc) of dietary significance. The proteins or their fragments are also useful as
                                                                                                                                                                                                                                                                                                1051 tctttgtggtcatcactt 1068

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This sequence encodes the flea esterase protein, nfE51515 (the complementary strand is shown in AAV40738), of the invention. When administered to animals, the protein induces a protective immune cadministered to animals, the protein induces a protective immune compositions containing CE proteins, are used, therapeutically or as vaccines, to protect particularly mammals and birds, specifically cats and dogs, against haematophagous ectoparasite infestation (HEP), compositions containing the proteins are used, therapeutically cats and dogs, against haematophagous ectoparasite infestation (HEP), compositions can be used to treat carthropods generally, including pests of agricultural crops, trees, cc stored goods etc., also those that are vectors of disease. Fragments of the DNA can be used as probes and primers for identification or compounds to the DNA can be used as probes and primers for identification or compounds to a protein and to target cytotoxic compounds to HEP. The compounds containing CE are effective against both adult and larval stages; they can be used development, metamorphosis, feeding, digestion and reproduction.
                                                                                                                                                                                                                                                                                                                                                                               Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     СÃ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       specifically fleas. More generally the compositions can be used to treat arthropods generally, including pests of agricultural crops, trees, stored goods etc., also those that are vectors of disease. Fragments of the DNA can be used as probes and primers for identification or production of nucleic acid. Antibodies against the protein can be used for passive immunisation; to screen expression libraries; to isolate the protein and to target cytotoxic compounds to HEP. The compounds containing CE are effective against both adult and larval stages; they target CEs, including juvenile hormone, that are involved in development, metamorphosis, feeding, digestion and reproduction.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  immunosuppressive; antiasthmatic; analgesic; hypotensive; cytostatic; respiratory obstruction; pulmonary obstruction; impeded respiration; surfactant hypoproduction; pulmonary vasoconstriction; asthma; RDS; respiratory distress syndrome; pain; cystic fibrosis; allergic rhinitis;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       cc immunosuppressive, antiasthmatic, hypotensive and cytostatic activities.

CC The antisense oligonucleotides and (1) can be used to down-regulate the cc expression and or activity of target polypeptides associated with activating peptide factors and transmitters, transcription factors, immunoglobulins and antibodies, antibody receptors, cytokines and communoglobulins and antibodies, antibody receptors, cytokines and communoglobulins and antibodies, antibody receptors, cytokine and cc chemokines, endogenously produced specific and non-specific enzymes, binding proteins, adenosine receptors bradykinin receptors, cytokine and cc receptors, cytokine and cc receptors, communoglobulins, and peripheral nervous and non-nervous system creceptors, cytokine and cc receptors, solventh factors, vasoactive peptides and creceptors, cytokine and cc receptors, communities, defensins, growth factors, vasoactive peptides and creceptors, defensins, growth factors, vasoactive peptides and creceptors, binding proteins and malignancy associated proteins. The creceptors, binding proteins and malignancy associated proteins. The creceptors oligonuclectides may be used in this way to treat disorders including respiratory obstruction (especially pulmonary obstruction cand/or bronchoconstriction) and/or lung inflammation, allergy(ies) cc and/or surfactant hypoproduction which are associated with a disease or condition selected from pulmonary vasoconstriction, inflammation, callergies, asthma, impeded respiration, respiratory distress syndrome conversation, emphyseman, chronic obstruction value nulmonary vasoconstriction, pulmonary disease (CDP), pulmonary disease (CDP).
                                                                                                                                                                                                                                                       Ð
                                                                                                                                                                                                                                                                                                                                                                                                                                                             Query Match

DT 26-JUN В Š The present invention describes a new composition comprising an antisense oligonucleotide (ON) with low adenosine (up to 15%), which care targets nucleic acids involved in bronchoconstriction, allergies, and/or inflammation. The ON can have antiinflammatory, antiallergic, antiasthmatic, cytostatic and analyssic activities. The compositions are useful for the treatment of diseases associated with inflammation, impaired airways, including lung disease and diseases whose secondary effects afflict the lungs of a subject. They can be used for treating e.g. is chaemic conditions, pulmonary vasoconstriction, allergies, cystic fibrosis, pulmonary hypertension, emphysema, chronic obstructive pulmonary disease (OPD), and cancers such as leukaemias, lymphomas, carcinomas, and cancers which may metastasise to the lungs, including breast and prostate cancer. The reduction of the adenosine content of the ONs reduces side effects. The A-containing ONs break down with the release of decayadenosine which activates adenosine receptors causing bronchoconstriction and inflammation. AAA32312 represent the Query Match Best Local : Matches 1081 tgggtgaaagtgagttcc 1098 nucleotide sequences given in the sequence listing from the present invention, which correspond to SEQ ID NO:1 to 2815, and then the last 185 sequences are also called SEQ ID NO:1 to 185, but the sequences differ from the previously named sequences. SEQ ID NO:11 to 1680 (AAA32923 to AAA33992) are specifically claimed ONs from the present invention. N.B. Sequences given in the disclosure of the present invention do not match up with their corresponding SEQ ID NO: sequence AAH13702 standard; AAH13702; Sequence 1561 BP; 354 A; 445 C; 142 tgggtgaaagtgagttcc 159 Similarity the sequence listing.                                                                                                                                                                                                                                                                                                                                                                                                    sequence and an oligonucleotide comprising a sequence complementary to a polynucleotide which comprises a 3'-end sequence, where the oligonucleotide which comprises at least 13 nucleotides and the combination of the 5'-end sequence/3'-end sequence is selected from those defined in the specification. The primer sets can be used in antisense therapy and in gene therapy. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs. The primers allow obtaining of the full-length cDNAs easily without any specialised methods. AAH03166 to AAH13628 and AAH13633 to AAH18742 represent human cDNA sequences; AAB92446 to AAB95893 represent human amino acid sequences; and AAH13629 to AAH13632 represent oligonucleotides, all of which are used in the exemplification of the properties.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   29-JUL-1999;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               protein. The protein is isolated from the green-lipped mussel (Perna canaliculus), and exhibits, inter alla, anti-thrombin activity and divalent metal cation binding activity. The serine protease inhibitor protein has a molecular weight of about 55 kilo Daltons. The protein, and its fragments, are useful in medicaments, in food, as dietary supplements or as bioremediation agents. In the dietary supplements or as bioremediation agents. In the dietary supplements, the protein is associated with or bound to at least one divalent cation (such as calcium, magnesium or zinc) of dietary significance. The proteins or their fragments are also useful as

                                                                                                                                                                                                                                                                                                                     CC immune stimulating or immune suppressing activity. It can be used in the creatment of various immune deficiencles and disorders, and to treat confectious diseases caused by viral, bacterial, fungal or other confectious. The protein is also used for treating autolimmune disorders conditions. The protein is also used for treating autolimmune disorders conditions multiple sclerosis, systemic lupus erythematosus, and rheumatoid conditions such as asthma, and in immune suppression after organ conditions such as asthma, and in immune suppression after organ and consequently in the treatment of myeloid or lymphoid cell cand consequently in the treatment of myeloid or lymphoid cell conditions. It is also used in compositions for tissue growth or cregeneration. The protein is also used in the treatment of seteoporosis consteoparthritis and in the treatment of periodontal disease and other constearthritis and in the treatment of periodontal disease and other constearthritis and in the treatment of periodontal disease, and consequence is a laboused in the treatment of periodontal disease, and consequence is a laboused in the treatment of periodontal disease, and consequence is a laboused in the treatment of nervous consequence is a laboused for promoting or inversion injury in various calloused as a contraceptives since they exhibit activity or inhibit related activities and as a fertility inducing therapeutic. They are used for conditions coagulation disorders and in treatment and prevention of conditions are contraceptives and in treatment and prevention of conditions are contraceptives and in treatment and prevention of conditions are from conditions and treatment and prevention of conditions are contraceptives and in treatment and prevention of conditions are conditions are conditions and conditions are conditions are conditions are conditions and conditions are conditions are conditions are conditions are conditions are conditions are conditions are conditions are conditions are conditions and conditions are condi
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    24-JUL-1998;

                                                                                                                                                                                                                                                                                     administered to animals, the protein induces a protective immune (antibody) response against carboxylesterase (CE), so they, or compositions containing CE proteins, are used, therapeutically or as vaccines, to protect particularly mammals and birds, specifically cats and dogs, against haematophagous ectoparasite infestation (HEP), ce specifically fleas. More generally the compositions can be used to treat arthropods generally, including pests of agricultural crops, trees, stored goods etc., also those that are vectors of disease. Fragments of the DNA can be used as probes and primers for identification or production of nucleic acid. Antibodies against the protein can be used for passive immunisation; to screen expression libraries; to isolate the protein and to target cytotoxic compounds to HEP. The compounds containing CE are effective against both adult and larval stages; they
                                                                                                                                                             Matches
                                                                                                                                                                            Query Match

                                                                                                                                                                                                                                                                                                                                                                                               protective immune (antibody) response against carboxylesterase (CE), so they, or compositions containing CE proteins, are used, therapeutically or as vaccines, to protect particularly mammals and birds, specifically cats and dogs, against haematophagous ectoparasite infestation (HEP), specifically fleas. More generally the compositions can be used to treat arthropods generally, including pests of agricultural crops, trees, stored goods etc., also those that are vectors of disease. Fragments of the DNA can be used as probes and primers for identification or production of nucleic acid. Antibodies against the protein can be used for passive immunisation; to screen expression libraries; to isolate the

This was obtained by standard cloning and screening procedure, where it was first isolated in incyte clone 148415 from a normal fibroblast library (FIBRNGT01). A comparison of the MVBP with the Aplysia vesicle-associated membrane protein (VAMP)/synaptobrevin binding protein showed that they shared 44% identity. MVBP and its products can be used to diagnose, treat or prevent disorders of cell proliferation (e.g. cancer) or inflammation. Sequences complementary to MVBP can be used to detect MVBP in samples. Abs are used to diagnose conditions associated with MVBP or in assays to monitor patients being treated with MVBP or agonists/antagonists.
                                                                                                                                                                                                                                                                                     Human vesicle binding protein - useful for the diagnosis, treatment and prevention of cell proliferation disorders and inflammation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           CDS

Ap12 showed transcription factor E2F and RB binding activities. The 5' and 3' cDNA sequences were determined for Ap2 (AAQ67395, AAQ67596), Ap8 (AAQ67597, AAQ67598) an Ap15 (AAQ67599, AAQ67600), and full-length encoding sequences for Ap (AAQ67601) and Ap10 (AAQ67601), which also encoded RB-associated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Nucleic acid encoding retinoblastoma-associated polypeptide(s) used for producing prods. for use in studying cell cycling and disregulated cell growth.
                                                                                                                                                            (AVET )
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Nucleotide sequence of the Arabidopsis SGS3 polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           15-MAY-2001

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    1020 aggtgcttgaggaatctc 1037
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The SGS3 gene is essential for post-transcriptional inactivation (degradation of RNA) and for resistance to viruses. Overexpression of SGS3 results in plants with increased resistance to viruses, while inactivation of SGS3 in transgenic plants (e.g. by expressing antisense RNA, by mutation or by homologous recombination) increases the level of the transgene product. This product may e.g. impart resistance (to herbicide, insects or pathogens), alter contents of essential fatty acids or proteins, or is pharmaceutically active,

                                                                                                                                                                                                  A method has been developed for the production of protein hydrolysates (PH) comprising reacting a protein with: (1) at least one polypeptide with Gly-releasing activity; and (ii) at least one polypeptide with Gly-releasing activity; and (ii) at least one other protease so that the amount of Gly produced is greater than when the protease is used alone. PH are used to improve flavour of foods (e.g. baked goods) and as animal feed additives. PH are preferably also enriched in Glu (free and/or peptide bound), so have improved flavour and palatability. Addition of a polypeptide with Gly-releasing activity increases the degree of hydrolysis (or reduces the amount of enzyme needed) and hydrolysates have better solubility, and emulsifying and foaming properties. Baked goods containing them have improved aroma, mouthfeel and crust colour. The present sequence encodes Sphingomonas capsulata aminopeptidase I, which is used in the method of the invention.

have anticancer activity and are highly expressed in ovarian tumor tissue (and some also in testis and breast cancer tissue). The products of the invention can be used for gene therapy. (A) are used (i) for recombinant expression of polypeptides (B) and (ii) to isolate complete genes. (B) are used (i) to identify agents suitable for treatment of ovarian cancer; (ii) directly for treating this form of cancer (including expression from gene therapy vectors) and (iii) for generatic

generation

invention describes novel nucleic acid (cDNA) sequences (A) which

                                            complementary strand is shown in AAV40736), of the invention. When administered to animals, the protein induces a protective immune (antibody) response against carboxylesterase (CE), so they, or compositions containing CE proteins, are used, therapeutically or exactnes, to protect particularly mammals and birds, specifically and dogs, against haematophagous ectoparasite infestation (HEP).
                                                                                                                                                                                          New nucleic acid encoding carboxyl:esterase(s) from fleas - us e.g. in vaccines, for preventing infestation by haematophagous ectoparasites, particularly on cats and dogs
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     sequence tags) from a particular tissue type before comparison of the expression patterns. This allows a significantly longer fragment of the gene to be revealed, so should reduce the number of failures associated with the fact that ESTs from different libraries may represent different parts of the same unknown gene, distorting the estimated frequency of occurrence in a particular tissue. AAZ77450-Z77572 represent the human ovarian tumor cDNA library derived EST fragments described in the method
                                                                                                                                                                                                                                                                      WPI;
               and dogs, against haematophagous ectoparasite infestation (HEP), specifically fleas. More generally the compositions can be used to treat arthropods generally, including pests of agricultural crops, trees,
                                                                                                                                                                                                                                                                                                                                                                                          10-NOV-1997;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Ctenocephalides
                                                                                                                                                              Claim 1; Page 106-109; 230pp; English.

   they, or compositions containing CE proteins, are used, therapeutically or as vaccines, to protect particularly mammals and birds, specifically cats and dogs, against haematophagous ectoparasite infestation (HEP), specifically fleas. More generally the compositions can be used to treat arthropods generally, including pests of agricultural crops, trees, stored goods etc., also those that are vectors of disease. Fragments of the DNA can be used as probes and primers for identification or production of nucleic acid. Antibodies against the protein can be used for passive immunisation; to screen expression libraries; to isolate the protein and to target cytotoxic compounds to HEP. The compounds containing CE are effective against both adult and larval stages; they target CEs, including juvenile hormone, that are involved in development, metamorphosis, feeding, digestion and reproduction.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       the DNA can be used as probes and primers for identification or production of nucleic acid. Antibodies against the protein can be for passive immunisation; to screen expression libraries; to isolar protein and to target cytotoxic compounds to HEP. The compounds containing CE are effective against both adult and larval stages; including juvenile hormone, that are involved in
                                                                                                                                                                                                           This sequence is the complementary strand of the DNA encoding the fl esterase protein, nfE51982 (see AAV40735 for coding strand), of the invention. When administered to animals, the protein induces a protective immune (antibody) response against carboxylesterase (CE),

This sequence encodes the flea esterase protein, nfE52144 (the complementary strand is shown in AAV40759), of the invention. When CC administered to animals, the protein induces a protective immune CC (antibody) response against carboxylesterase (CE), so they, or CC compositions containing CE proteins, are used, therapeutically or as CC vaccines, to protect particularly mammals and birds, specifically cats CC and dogs, against haematophagous ectoparasite infestation (HEP), CC specifically fleas. More generally the compositions can be used to treat CC arthropods generally, including pests of agricultural crops, trees, CC stored goods etc., also those that are vectors of disease. Fragments of CC the DNA can be used as probes and primers for identification or production of nucleic acid. Antibodies against the protein can be used CC protein and to target cytotoxic compounds to HEP. The compounds CC containing CE are effective against both adult and larval stages; they CC development, metamorphosis, feeding, digestion and reproduction.

                                                                                                                                                                                                                                                                                                                            This sequence is the complementary strand of the DNA encoding the flea esterase protein, nfE52144 (see ANA40758 for coding strand), of the invention. When administered to animals, the protein induces a protective immune (antibody) response against carboxylesterase (CE), so they, or compositions containing CE proteins, are used, therapeutically or as vaccines, to protect particularly mammals and birds, specifically cats and dogs, against haematophagous ectoparasite infestation (HEP), specifically fleas. More generally the compositions can be used to treat arthropods generally, including pests of agricultural crops, trees, stored goods etc., also those that are vectors of disease. Fragments of the DNA can be used as probes and primers for identification can be used for machine in minimal faction of nucleic acid. Antibodies against the protein can be used for machine in the content of the DNA can be used as probes and primers for identification can be used for machine in the content of the DNA can be used as probes and primers for identification.

                                                                                                                                                                                                                                                                                         밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This invention describes novel isolated Streptococcus pneumoniae

polynucleotides (see AAZ95173-Z96494) and their encoded proteins (see

AX85792-Y86182). The DNA, vectors and host cells described in the

method of the invention are useful for the recombinant expression of the

polypeptides. The polypeptides are useful for treatment or prevention of

cuch a polypeptide. They can also be used to screen for compounds which

theract with and inhibit or activate such a polypeptide. The

polypeptides (or DNA encoding them, via gene therapy) are also useful

for inducing an immunological response in a mammal. The antagonists are

useful to inhibit such bacterial polypeptides. The polypeptides are

particularly useful to identify antimicrobial compounds and antibiotics.

They are also useful to determine their role in pathogenesis of

cuch infection, dysfunction and disease.
                                                                                                                                                                                                                                                                                                                                                                                                                     Query Match

                                                                                                                                                                                                                                                                                                                                                                                       The polypeptide can potentially be used for the diagnosis and prevention of bacterial infections, especially SP infection. It may be used for the treatment of diseases such as otilis media, conjunctivitis, pneumonia, bacteremia, meningitis, sinusitis, pleural empyema, endocarditis or infection of the cerebrospinal fluid.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Streptococcus pneumoniae polynucleotides - useful for developing products for diagnosis, prevention and treatment of infections pneumonia, bacteremia, meningitis or endocarditis

The aminopeptidase polypeptides catalyse the removal of amino acids from the "terminal end of peptides", oligopeptides or proteins. They can be used in the production of protein hydrolysates for enhancing the degree of hydrolysis and flavour development, particularly in foods. They can also be used to deactivate enzymes. They can also be used for specific clavage of peptide sequences, e.g. to provide the

AAH51601 represents a human genomic nucleotide sequence comprising sbg1, CC 934665, sbg2, 935017 and 935018 nucleic acid sequences located on the CC human chromosome 13931-933 locus. The nucleotide sequences contain CC biallelic markers and polymorphisms. Sequences AAH51602 - AAH51626 and CC PAB62907 - AAB62915 represent cDNA human sbg1 cDNA sequences and protein CC products. AAH51627 - AAH51631 and AAB62916 - AAB62918 represent 935018 CC CDNA sequences and protein products. Primers AAH51362 - AAH51699 are used to isolate sbg1 cDNAs, while sbg1 exons from different primates are CC represented by sequences AAH51642 - AAH51699. Nucleotide sequences of CC amplicons which comprise biallelic markers located on the chromosome CC 13931-933 locus are represented in AAH51819. Nucleotide sequences of CC are represented in the sequences by degenerate/undefined base codes. PCR primers AAH51818 and AAH51819 are used in the isolation of sequences of the invention. The biallelic marker containing nucleotide sequences are used to determine the identity of the nucleotide at a biallelic marker in a sample DNA sequence. The nucleotide sequences may be labelled and used for genotyping by determining the identity of a nucleotide at a Region CC subjects. By determining the frequency of a biallelic marker in a biological sample from single or multiple consultation an association between a genotype and a trait a banlotype and
                                                                    population an association between a genotype and a trait, a haplotype and a trait and a phenotype and a trait can be detected. The sequences can be used to determine a predisoposition to or early onset of schizophrenia or bipolar disorder or a beneficial response to or side effects related to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Polynucleotides comprising sequences from sbg1 markers are used for genotyping and detecting s disorder and predisposition to these disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Claim 2;

                                                                                                                                                                                                                                                                                                                                                                              Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            human chromosome 13q31-q33 locus. The nucleotide sequences contain biallelic markers and polymorphisms. Sequences ANH51602 - ANH51626 and ABB62907 - ANB62915 represent cDNA human sbg1 cDNA sequences and protein products. ANH51627 - ANH51631 and ANB62916 - ANB62918 represent g35018 c cDNA sequences and protein products. Primers ANH51632 - ANH51639 are used to isolate sbg1 cDNAs, while sbg1 exons from different primates are represented by sequences ANH51642 - ANH51699. Nucleotide sequences of amplicons which comprise biallelic markers located on the chromosome c anglicons which comprise biallelic markers located on the chromosome c are represented in the sequences by degenerate/undefined base codes. PCR c primers ANH51818 and ANH51819 are used in the isolation of sequences of the invention. The biallelic marker containing nucleotide sequences are used to determine the identity of the nucleotide at a biallelic marker in a sample DNA sequence. The nucleotide sequences may be labelled and used for genotyping by determining the identity of a nucleotide at a Region c subtotte By determining the from single or multiple
                                                                                                                                                                                                                                                                                                                                                                                                                                Query Match

rne present sequence represents the genomic sequence of the Arabidopsis thaliana SGS3 gene. The SGS3 gene is essential for post-transcriptional inactivation (degradation of RNA) and for resistance to viruses. Overexpression of SGS3 results in plants with increased resistance to viruses, while inactivation of SGS3 in transgenic plants (e.g. by expressing antisense RNA, by mutation or by homologous recombination) increases the level of the transgene product. This product may e.g. impart resistance (to herbicide, insects or pathogens), alter contents of essential fatty acids or proteins, or is pharmaceutically active, e.g. an immunoglobulin or interferon.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention describes a library of polynucleotides comprising 1079 nucleotide sequences (given in AAH3145). Also described are: (1) an isolated polynucleotide (I) having at least 90% identity to one of the 1079 sequences; (2) a recombinant host cell containing.(1); (3) an isolated polypeptide (II) encoded by (I); (4) an antibody that specifically binds to (II); (5) a vector comprising (I); and (6) a method of detecting differentially expressed genes correlated with a cancerous state of a mammalian cell comprising detecting a gene product encoded by (I) to the 1079 sequences given in the specification. The polynucleotides are used to monitor patients having (or susceptible) to cancer to detect potentially malignant events at a molecular level before they are detectable at a gross morphological level. The polynucleotides are useful for monitoring the efficacy of various therapies and preventive interventions. Polynucleotide probes based on the disclosed sequences are useful for chromosome mapping and detection of transcription levels. The 1079 polynucleotide sequences were derived from a human colon cancer cell line Km12L4-A cDNA library.

CC (KIM) CDNA COINCE KIM Proteins can be administered therapeutically collections. Kim proteins can be administered therapeutically collections of damaged tissue (e.g. renal tissue), since the KIM proteins care upregulated in injured or regenerating (especially renal) tissues. CC KIM fusion proteins, conjugates, antibodies and vectors can also be used therapeutically, e.g. these or the KIM proteins may be included with an acceptable carrier in pharmaceutical compositions, useful for therapy/ CC prophylaxis of conditions associated with disfunction/disregulation of CC KIM genes or proteins, especially renal diseases or impairments of renal CC function in humans (e.g. acute renal failure, acute nephritis). The CC polynucleotides can be used to produce antisense sequences which, when CC internalised into cells, can disrupt expression of a cellular KIM gene, CC also useful in therapy (e.g. to block the growth of tumours dependent on CC KIM for growth) or compositions. The proteins and polynucleotides are CC (indicative of increased risk, or presence of, renal injury/diseases (indicative of increased risk, or presence of, renal injury (indicative of increased risk, or presence of, an autoimmune response or abnormal cc also be used to locate KIM-producing cells (especially specific loci, e.g. issue masses abnormal transported tissue). The proteins can cc also be used to locate KIM-producing cells (especially specific loci, e.g. of issue masses abnormal transported to the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the c
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Claim 9; Page 109-113; 213pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Kidney injury-associated molecule, KIM, polypeptides - upregulated in injured or regenerating tissues, useful to promote tissue growth and regeneration, especially to treat renal conditions
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    WPI; 1999-045312/04

The enzyme is involved in the last step of the astaxanthin biosynthesis pathway, from beta-carotene to astaxanthin. P. rhodozyma is a carotenogenic yeast strain. The astaxanthin synthetase polynucleotides and polypeptides are useful for producing astaxanthin. Astaxanthin is an antioxidant which may be used to protect living cells against diseases such as cancer. Astaxanthin is also used as a colouring reagent, e.g. in farmed fish like salmon to impart an orange-red coloration.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central netrous system disease, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, Activiny, Chemotactic/Chemokinetic activity, hamostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening,

The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system disease, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, Activinyinhibin activity, chemotactic/chemokinetic activity, hamostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and
A computer readable medium has been developed which has recorded 982 nucleotide sequences isolated from the Enterococcus faecalis AAX12938 to AAX13919 represent these nucleotide sequences which a
                                                                                                  New isolated Enterococcus faecalis polynucleotides and polypeptides - used to develop products for the detection of Enterococcus and for use in vaccines for prevention or attenuation of Enterococcus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  2831 aaagaaccctctgaaaaa 2848

primary nucleotide sequences, also known as contigs. The computer-based system can identify fragments of the Enterococcus faecalis genome with commercial importance. The products can be used to detect the presence of Enterococcus faecalis in samples. They can also be used for diagnosing Enterococcal infection in an animal and monitoring progression of disease, and for identifying agents which can be used to modulate the growth or pathogenicity of Enterococcus faecalis, or another related organism, in vivo or in vitro. In particular the polypeptides encoded by the Enterococcus faecalis nucleotide sequences can be used in vaccines to prevent or attenuate an Enterococcal

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Conservative
                    മ
                                 purification, this DNA was used as tracer in a subtractive hybridization reaction. The driver was PCR-amplified cDNAs from a pool of 5,000 clones made from the same library (cloneIDs 1323912-1325831, 1471368-1472903 and 1492104-1493255). Subtraction by Bento Soares and M. Fatima Bonaldo. "
